PERSONAL PROFILE

I am a second-year BSc Computing with Software Development student at Munster Technological University. I have acquired certified experience and skills in programming languages and debugging through projects and deliverables. I enjoy the opportunity to support the coding community and share my experience and knowledge to help tackle new problems and opportunities.

I seek opportunities where I can work independently or as part of a professional team, against existing processes or assist in creating new ones. I am seeking a software development internship where I can contribute to projects, gain practical industry experience and develop my technical skills within a professional development team.

SKILLS

- **Tools & Technologies:** GitHub, Visual Studio, Figma
- **AI & Emerging Technologies:** Use of AI-assisted tools (e.g. ChatGPT, Copilot) to support debugging, explain unfamiliar concepts, and improve development workflows.

EDUCATION

Munster Technological University **2024 - 2028**
BSc (Hons) Computing with Software Development - First Class Honours

- Programming in Python, Java, JavaScript, C# through structured assignments and application development.
- Applied object-oriented design principles to modular development and code reuse.
- Worked with SQL and relational databases, including schema design and query development.
- Developed web interfaces using HTML, CSS and JavaScript to create responsive front-end projects.

Killorglin Community College **2016 - 2022**
Leaving Certificate

- 7 subjects at honours level achieving a total of 433 CAO points.

WORK EXPERIENCE

Fexco Managed Services, Killorglin **May 2025 – August 2025**
Summer Intern

- Produced daily Excel reports tracking 300+ items of correspondence, improving workflow planning.
- Trained new staff, training in correct procedures and a variety of areas in the team.
- Digitized archived correspondence, reducing physical storage and document retrieval time.
- Developed and authored a training manual that standardised onboarding and supported cross-skilling across operational roles.

- Worked within a 6-person team processing hundreds of customer correspondence daily while maintaining strict data protection standards.
- Responsible for the conversion of physical documentation into a digital format, using specialized equipment.
- Produced monthly performance reports using Excel to support planning.
- Maintained structured digital and physical filing systems to support efficient document retrieval.

PROJECTS

Library Management System – C#

- Designed the architecture of a library management system using object-oriented and database principles.
- Implemented Create, Read, Update, and Delete functionality allowing users to manage book and user records, along with transaction handling for borrowing and returning items. This enabled the system to store, update and retrieve information reliably.

Budget Tracker – HTML, CSS, JavaScript

- Developed a web-based budget tracker to address the difficulty of monitoring personal spending and organising financial records.
- Designed and built a dashboard interface using HTML, CSS and JavaScript to input, store and display users spending data.

INTERESTS / ACHIEVEMENTS

Coder Dojo

- Delivered weekly coding workshops to groups of 20 students, supporting them in building beginner programming projects and developing confidence with technology.
- Contributed to the local coding community by mentoring students and sharing programming knowledge, while developing practical communication and mentoring skills by explaining technical concepts in an accessible manner.

MTU Innovation Challenge

- Collaborated and developed a practical solution to the marketing of The Crann Centre over a period of eight weeks, developing solutions to engage potential donors and to increase public knowledge of the centre using social media techniques.
- Presented the project to a panel of judges, along with students and stakeholders.
